Values and differentiators

Authenticity and transparency:

We build relationships based on trust, transparency and fairness, with the aim of creating win-win collaborations."

Adaptability and continuous learning:

We take on new challenges and invest time to find the best solutions, regardless of complexity.

Long-term partnership:

Each project is treated as a joint investment, created to bring real and scalable value to both parties.

Target audience and positioning

Lagrange primarily targets small and medium-sized companies looking to develop their digital presence through websites, web applications or customized software solutions. At the same time, the company positions itself as a trusted partner for larger organizations pursuing digitalization processes or developing complex digital products.

In the market, Lagrange assumes a positioning oriented towards affordable, fast and scalable solutions, so that clients can start with a minimal option, but with clear potential for long-term growth. The emphasis is on sincere consulting and balanced collaboration, in which technology directly serves business objectives.

Vision and long-term goals

Lagrange aims to become a trusted partner for its clients, building recurring and sustainable relationships. The main objective is to develop a solid portfolio of long-term collaborators, without losing its openness to new clients and new projects.

The company aims to tackle both large, long-term projects and short-term initiatives, where it can bring value through direct expertise or through involvement in the form of consultancy and technical verification. Over time, Lagrange aims to consolidate a reputation based on reliability, flexibility and the ability to respond in a balanced way to diverse challenges.

Our mission

Lagrange's mission is to accelerate technological development by supporting small and medium-sized companies to digitize and automate their processes. Through accessible and scalable solutions, offered with transparency and authenticity, the company aims to free resources from repetitive tasks and create the premises for addressing truly important challenges. In this way, Lagrange aims to be a trusted partner in building a future where technology equitably serves the sustainable development of business and society.
